

Product QA Test Plan (Manual Testing)

1. Project Overview

Product is a web-based AI-powered contract review platform that allows users to upload contracts and receive clause-level insights, risk scores, and compliance mappings. The MVP includes core functionality such as file upload, clause detection, risk tagging, and summary reporting.

2. Testing Scope

Included:

- User authentication (sign up/login/logout)
- Contract upload (PDF, DOCX, TXT)
- Clause extraction and display
- Risk scoring and compliance tagging
- Clause summary output
- Dashboard view of uploaded documents
- Download/export (PDF/Excel)
- Legal disclaimer visibility
- Basic admin analytics view

Not Included:

- API integrations
- Multi-user collaboration features
- Notifications & alerts

- Paid subscription logic (for this MVP phase)

3. Testing Approach

Manual, end-to-end testing based on feature modules and user flows. Exploratory testing will also be conducted to identify edge cases and UX gaps.

4. Test Types

Test Type	Description
Functional Testing	Validate that features work as described
UI/UX Testing	Ensure the user interface is clean, intuitive, and responsive
Negative Testing	Test error states (e.g., unsupported file formats)
Compliance Tag Accuracy	Check the clause-to-compliance mapping, where applicable
Exploratory Testing	Freestyle testing for usability issues and edge cases

5. Test Environment

- Browser: Chrome, Firefox (Desktop)
- OS: Windows 11, macOS (latest)
- Test Data: Sample NDAs, vendor contracts, DPAs
- Access: Dev/QA environment with feature-complete MVP

6. Tools to Use

- Test Case Tracking: Google Sheets
- Bug Reporting: Trello / Jira / Google Sheets
- Feedback Tracker: Airtable / Notion
- Final Report: Google Docs (QA Summary Template)

7. Test Schedule & Milestones

Week	Focus	Deliverables
3	Planning + Test Case Design	Test case document (linked by module)
2	Test Execution Cycle 1	Bug reports + updated test statuses
2	Retesting + Exploratory Testing	Bug retest log + exploratory notes
1	Regression Testing + Final QA Summary	Final QA report + improvement recommendation

8. Entry & Exit Criteria

Entry:

- Stable dev environment available
- MVP features deployed for testing
- Access to sample test contracts

Exit:

- All critical test cases executed
- Major bugs reported and verified as fixed

- QA summary reviewed and shared with the team

9. Risks

Risk	Mitigation
Feature delays from the dev team	Use staggered test planning per feature
Ambiguity in AI output	Collaborate with the legal advisor for verification
Limited access to sample contract types	Request diverse examples from the team

10. Deliverables

- Test Case Suite (Google Sheet/Notion)
- Daily/Weekly Bug Reports
- Feedback Tracker (bugs + usability comments)
- Final QA Summary Report with recommendations
