

	Title	Description	Preconditions	Test Steps	Expected Result	Type	Priority	Status
PERF-01	Load Test – Dashboard	Verify dashboard loads within acceptable time under normal load	50 concurrent users	1. Simulate 50 users logging in 2. Each opens dashboard	Average load time ≤ 3s	Load	High	Pass
PERF-02	Stress Test – Dashboard	Measure dashboard behavior under 3× expected load	150 concurrent users	1. Simulate 150 users logging in and accessing dashboard	System does not crash; ≥90% responses < 5s	Stress	High	Pass
PERF-03	Load Test – Registry Form Access	Validate load time for a complex registry form	50 users accessing Registry	1. Simulate 50 users opening “Muscle Function” form	Form loads ≤ 2.5s consistently	Load	High	Pass
PERF-04	Concurrent Submission – Registry	Test performance during concurrent data submissions	30 concurrent form submissions	1. Simulate 30 users saving forms simultaneously	All saves succeed within 3s	Load	Medium	Pass
PERF-05	Load Test – Export Module	Test data export performance under normal conditions	30 concurrent export requests	1. Simulate 30 users exporting registry data	Export completes ≤ 5s; file is valid	Load	High	Pass
PERF-06	Spike Test – Export	Simulate sudden spike in export usage	100 requests in <30s	1. Spike export button clicks 2. Observe system behavior	Server handles spike or queues with minimal delay	Spike	Medium	Pass
PERF-07	Load with Offline Sync Events	Measure response during sync uploads + dashboard use	40 users sync + 20 on dashboard	1. 40 users reconnect and sync 2. Others use dashboard	Sync completes ≤ 5s; dashboard load ≤ 4s	Stability	Medium	Pass
